

R.SaranRaj

UI/UX Designer

439,Harveypatti,Madurai, Tamil Nadu | saranraj9738@gmail.com | +91 9384117094 | Portfolio: saran-portfolio-lemon.vercel.app

Professional Summary

Aspiring UI/UX Designer with hands-on experience in end-to-end product design — spanning wireframing, user flows, high-fidelity UI, and interactive prototyping. Proficient in Figma with a portfolio of mobile app concepts built around real user needs. Passionate about crafting intuitive, inclusive experiences through research-informed and visually purposeful design.

Skills

- User Experience Design
- User Interface Design
- Wireframing
- Interactive Prototyping
- User Flow Design
- Visual Design
- Mobile App Design

Projects

Music Healing Application — UI/UX Design

- Designed a wellness mobile app letting users upload music and personalise it into a healing experience — covering goals like anxiety relief, relaxation, motivation, and headache recovery.
- Delivered complete UX artefacts in Figma: user flows, wireframes, high-fidelity screens, and interactive prototypes, all optimised for simplicity and accessibility.
- Built a four-step guided journey — goal selection, music upload, frequency education, personalised playback — minimising cognitive load at every stage.
- Applied a calm visual language with clear navigation and contextual copy, helping users understand frequency-based audio therapy without prior knowledge.

ShareSeat — Ride Sharing Application — UI/UX Design

- Designed a ride-sharing platform concept that connects solo travelers with drivers having empty seats, especially during high-demand travel times like festivals.
- Built a secure onboarding flow with phone number authentication, OTP verification, profile setup, and location access to ensure trusted user access.
- Created two core user journeys: Find Ride (search and join available rides based on route, date, and passenger count) and Offer Ride (list available seats with travel details).
- Developed a dynamic ride matching and listing system where users can view route-matched rides with details like driver name, location preferences, and contact information.
- Designed a complete end-to-end ride lifecycle, including booking status, “My Rides” section for active/completed trips, and a unified profile system for both offering and finding rides.
